

## **Boris Continuum Complete 7.0.1 FxPlug**

**August 2010**

### **Release Notes**

Please visit our web site at [www.borisfx.com](http://www.borisfx.com) for complete detailed information regarding the new filters and features that are included in this product release.

### **Boris Continuum Complete 7 FxPlug supports the following host applications:**

Apple FCS2

Apple FCS3

### **System Requirements:**

Max OSX 10.5 and higher

### **Known Issues and limitations:**

The following is a listing of the known problems in the product at time of shipping:

- Clicking rapidly on the font selector button in the BCS Title Flare filter can lead to instability in the Final Cut Pro host.
- Clicking on the reset button to reset parameter controls will not reset the controls if a group is collapsed – open the group before pressing the reset to workaround this issue.
- Clicking on the load button for presets in the Title Flare filter defaults to the last opened folder and not the Title Flare presets folder – manually locate the folder to workaround this issue.
- Motion can become unstable when the Optical Stabilizer filter is analyzing a clip in 16 bit – to workaround this host issue, perform Optical Stabilizer image analysis in 8 bit.

### **Registration and Technical Support**

Make sure to register your product in order to receive the latest technical and upgrade information. Registered users are often eligible to download free filters from the Boris FX website. Any free filters will be available on the Downloads page at [www.borisfx.com](http://www.borisfx.com).

You can register online at <http://borisfx.com/support/register.html>. We offer registered users one year of free technical support starting from the date of purchase.

### **Contacting Technical Support**
