

Boris Continuum Complete 7.0.2 update for Sony Vegas Release Notes

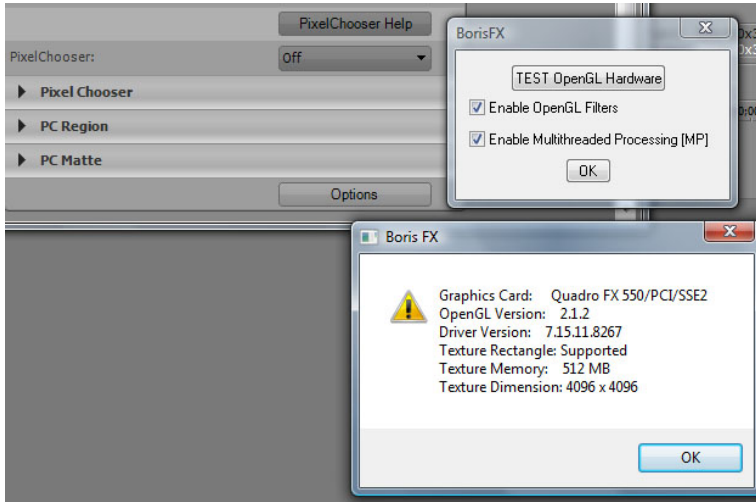

The Boris Continuum Complete 7.0.2 update for Sony Vegas is an update to the following release(s); - Boris Continuum Complete 7.0.0 & 7.0.1 for Sony Vegas (Boris Continuum Complete 7.0.0 for Sony Vegas Release Notes & Boris Continuum Complete 7.0.1 update for Sony Vegas Release Notes)

Changes made between version 7.0.1 and version 7.0.2 are:

- previously Boris Continuum was only available for 64bit Sony Vegas Pro. It is now available for both 64bit and 32bit Sony Vegas Pro 10.
- Map Displacement feature has been removed from Displacement Map, Vector Displacement & Polar Displacement filters as it does not work properly in Sony Vegas.
- the wording of an on-screen message sometimes posted during the motion tracking process was changed to better match Sony Vegas terminology. It now refers to the timeline cursor rather than the current-time marker.
- previously, the Motion Tracker would not allow tracking while the Vegas Video Preview was set to Quarter resolution. Now it is possible to Motion Track at Quarter resolution.
- the wording of the on-screen message warning when attempting to motion track at very low resolution has been changed for improved clarity.
- memory leak in Optical Flow filter is now Fixed.
- Boris FX button, that points to Boris homepage, has now been added to the window that pops up when Register BCC OFX button is clicked.

- the OGL Test dialog window now gives correct card, driver info. Formerly it did not identify the card & driver correctly.
